Product Overview

NORTHWEST PARTNERS LLC

WHAT IS POWERFLEX

PowerFlex's Adaptive Charging Network is the first electric vehicle charging system based on the most advanced load management technology today. Our proprietary Adaptive Load Management system continuously monitors your building's available energy and total electrical load then automatically adjusts the charging rate of each EV charger to deliver the requested energy desired by the driver

INSTITUTION/OFFICE

Retain valuable employees by providing at work car charging. Show your customers that you care about your employee's preference to drive electric vehicles

APARTMENTS

Provide an amenity to your residents and help to keep your building full. Additionally, create revenue and value to your building by becoming the fueling station of the future

CONDOMINIUMS

Create a higher condominium value by making your condominium more attractive to a greater number of potential buyers. Retain value in the property by future proofing your parking amenity

Why use PowerFlex?

An additional amenity that creates income AND value for commercial, residential, and condominium owners

- Monitors building power consumption moment by moment and redirects excess power for electric vehicle(EV) charging
- Bills vehicle owners for power consumed and becomes a source of revenue for building owners
- Eliminates the need for additional power to the building and related costs. For new AND existing buildings

Your Parking is the Gas Station of the Future

More EVs on the road means more EV chargers will be needed at businesses, schools and multi-unit residential properties.

PowerFlex takes advantage of the fact that most vehicles parked at work or at home will be there for several hours. By scheduling charging sessions based on energy available and desired departure time our Adaptive Charging Network reduces peak power demand by up to 60% with a corresponding reduction in costly electrical system upgrades.

All of this along with a simple billing option makes your parking a revenue generator and the gas station of the future.
